

Hollows as homes

Join us on a mission to explore, educate and protect the world of tree hollows.

Tree hollows play a crucial role in our waterways and bushlands, providing shelter for many native species including fish, possums, birds, and reptiles.

Hollow-bearing trees are declining at an alarming rate. Their loss has been classed as a Key Threatening Process to biodiversity in New South Wales.

In this hands-on 2-hour workshop, our next generation of citizen scientists will learn about the importance of hollows and how they can help protect them. Each participant will make their very own hollow home - a possum drey - to take home. By doing so, they'll contribute to a program that supports habitat creation for native wildlife.

This is an outside event so please bring a hat and water bottle. Please note: This workshop is suited to children 7 to 15 years old. Parental supervision/assistance is essential.
